Commercial product	©2023 James Brakefield	Known For
Synopsys ARC	Targets ASIC designs, very little public information: en.wikipedia.org/wiki/ARC_(processor)	CAD tools
TSK3000A	32-bit RISC, Altium core, free with tools	CAD tools
ESi-1600, Esi-3200	Ensilica 16-bit & 32-bit , targets both FPGAs & ASICs: en.wikipedia.org/wiki/ESi-RISC	design services
Freedom E & U series	SiFive has ASIC RISC-V cores	design services
Manik	32-bit RISC, Nitech core, free source	design services
MC8051	8051 clone from Oregano Systems, source is free	design services
ZPU	opensource.Zylin, "ZPU the worlds smallest 32 bit CPU with GCC toolchain"	design services
latticemicro8 & 32	8 & 32-bit Lattice Semiconductor cores, open source	FPGA chips
MicroBlaze	32-bit Xilinx core, free with tools, clones available	FPGA chips
NIOS II	32-bit Altera core, free with tools	FPGA chips
PicoBlaze	8-bit Xilinx core, free with tools, clones available	FPGA chips
Eric-5	Entner Electronics, 9-bit Forth	FPGA design
BA21-25	32-bit RISCs by CAST Inc., targets ASICs	IP
ColdFire	68000 clone by ip-extreme, free for Altera Cyclone 3	IP
MCL86	Low LUT count (308 LUTs, 4 BIkRAM) 8088 from MicroCore Labs	IP
OpenRISC 1000	32-bit from people at Beyond Semiconductor who target ASICs with BA12-25 series	IP
S8051XC3	highest performance 8051 clone, by CAST Inc., targets ASICs	IP
LEON	SPARC clone from Aeroflex Gaisler, LEON 2 & 3 source is free	SPARC IP
ARM Cortex A53	Incorporated into Altera Stratix X and Xilinx Zynq US+	uP IP
ARM Cortex A9	Incorporated into Altera Cyclone V and Xilinx Zynq	uP IP
ARM Cortex M0	Targets FPGAs and very low cost 32-bit processors	uP IP
ARM Cortex M1	Targets FPGAs, available for Actel, Altera & Xilinx	uP IP
ARM Cortex M3	Incorporated into MicroSemi SmartFusion1 & 2	uP IP
RISC-V	several ASIC versions, atleast 50 open source soft core versions	publications

Other Insights

Clean template VHDL code

Scott Baker: PDP8-soc, PDP11-soc & Nova-soc: Top level port maps of periphals & memory

Steve Teal: 1802-pico-basic, pumpkin, misc16 & mx65: Top level port map decomposition

For small micro-controllers with small memory needs, some soft cores are competitive with ASIC cores

For a good figure of merit must keep LUT count low and fmax high

Floating-point will add at least 2K LUTs, except Altera now provides 32-bit floating-point in their series-10 DSP blocks

RISC-V has many implementations both FPGA & ASIC

For current status see their website (riscv.org/risc-v-cores/) Both microBlaze and NIOS-2 have very good figure-of-merit numbers

©2023 James Brakefield

If RAM area removed from ARM Cortex A9 ASIC, it has the highest figure of merit

GRVI-phalanx (riscv) now outperforms NIOS2 & microBlaze!

here are "wrinkles" in CAD tools:

For ISE, Quartus and Vivado: success in inferring RAM and multipliers varies across vendor families & between vendors

For ISE, Quartus and Vivado: Fmax can vary in unpredicable ways across vendor families & between vendors

The tools vary in their reporting of LUTs used for route-thrus $% \left(1\right) =\left(1\right) \left(1$

Non-inferred register files result in high DFF counts

Two high performance ideas that work

 ${\bf Multi-threading\ or\ pipeline\ "barrel"\ increase\ performance\ without\ adding\ complexity:\ octavo,\ hive,\ or 1200_hp}$

State machine with program as logic for programs under 200 instructions: iDEA, Lutiac, C-to-Hardware (HLS)

No one architecture dominates in performance, size or speed

Many clone and legacy designs have relatively poor figure of merit, usually due to high LUT counts

SoC designs usually have higher LUT counts, often 2X greater

For usable original designs the numbers are RISC is 47%, stack 20%, accumulator 15%, other 11%, OpenRisc 7%

Some opencores "alpha" phase designs are system designs where core is stable and working

For those barrel designs with adjustable barrel length, intermediate barrel length gives best KIPS/LUT (sample size of 2)

Only 28nm part families in webpack tools are Cyclone V, Spartan-7, Atrix-7, Kintex-7 and Zynq-7

Only 16nm part family in webpack tools is Zynq-US+

No parts from highest performance FPGA families available in "webpack" tools (Arria X, Stratix X, Virtex-US+)
